World Happiness

- Purpose Statement
- Tell your story with Data
- Conclusion
- Appendix

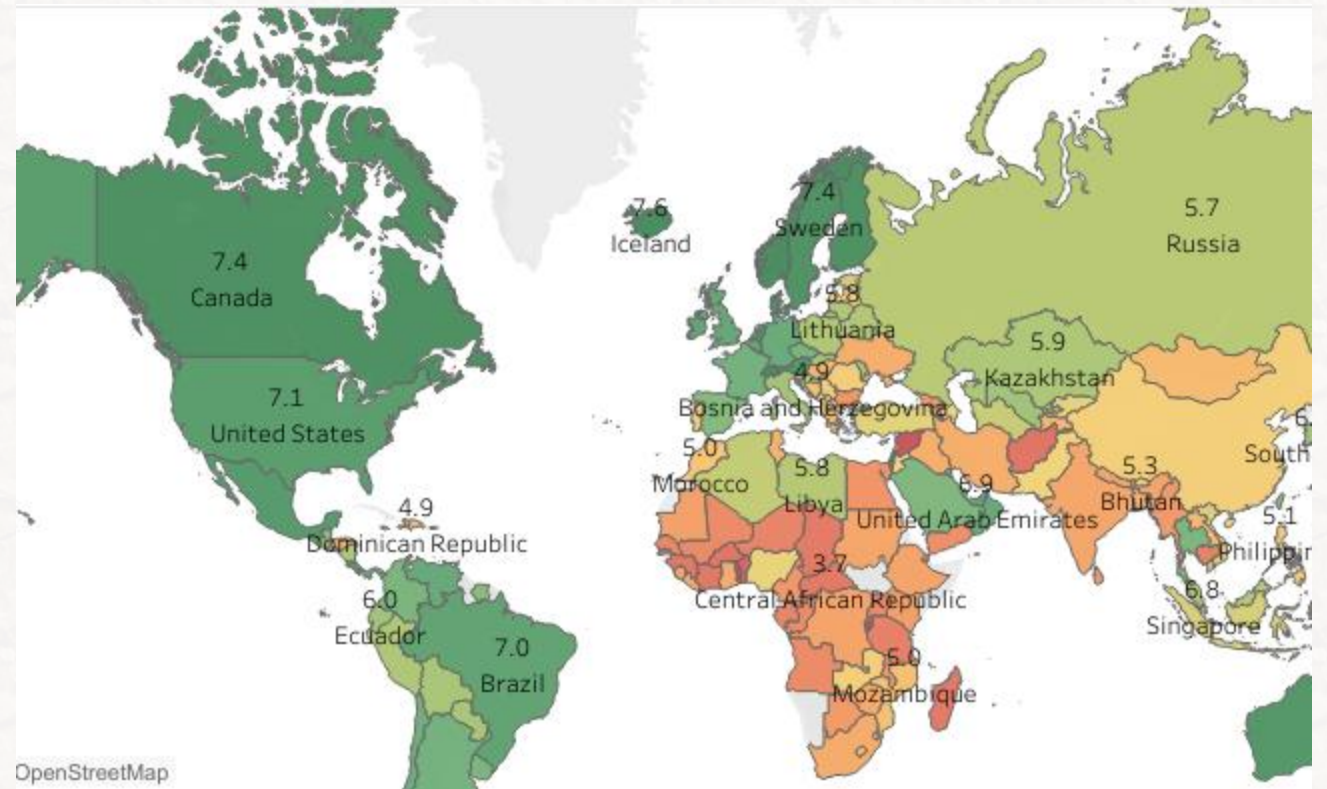

What are we talking
about?

Objective

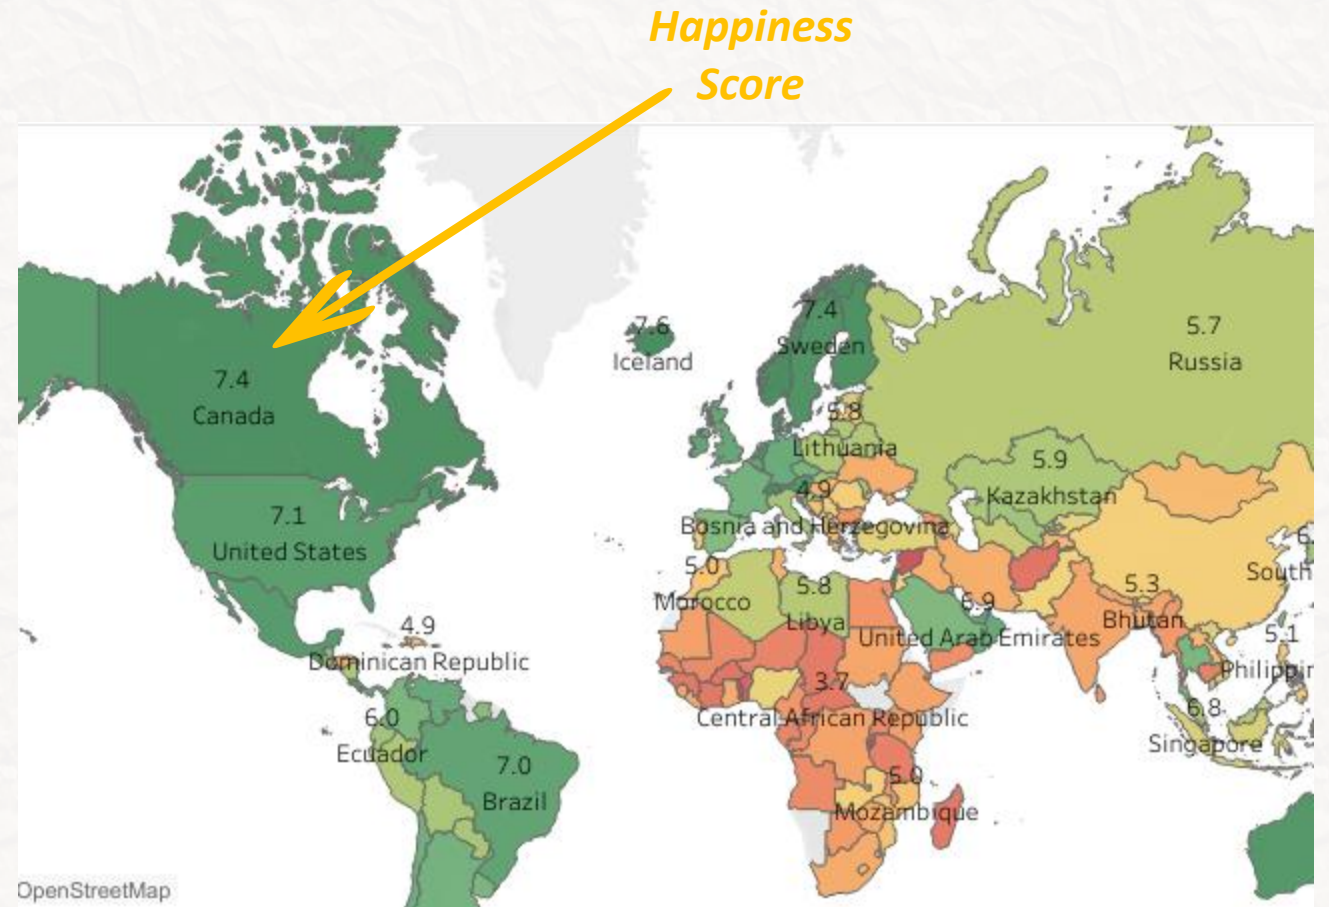

Identify if there are **geographic**, **demographic**, and/or **economic** factors that contribute to a **happier** life.

Present Data

Geographic

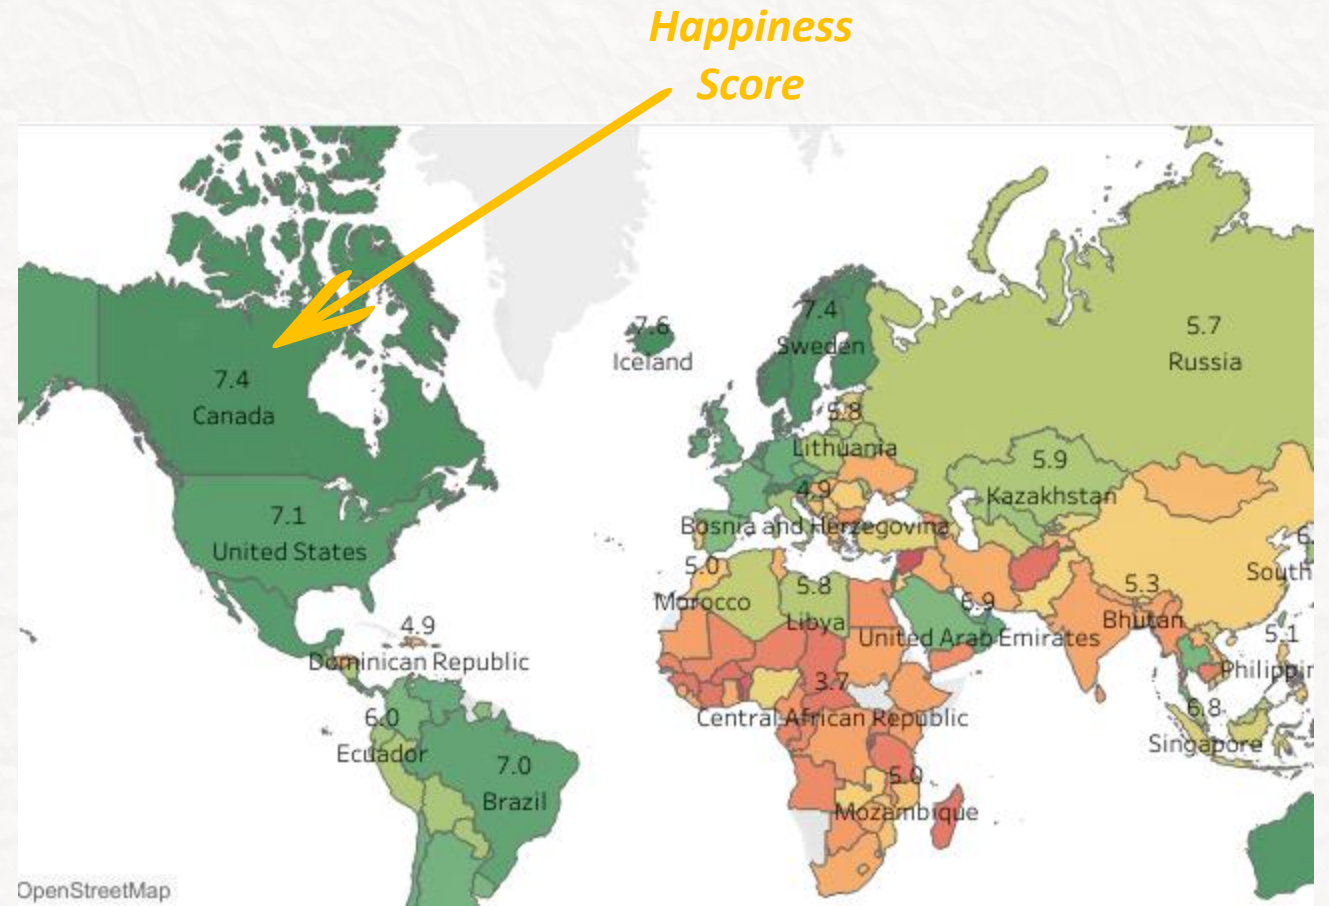

Geographic

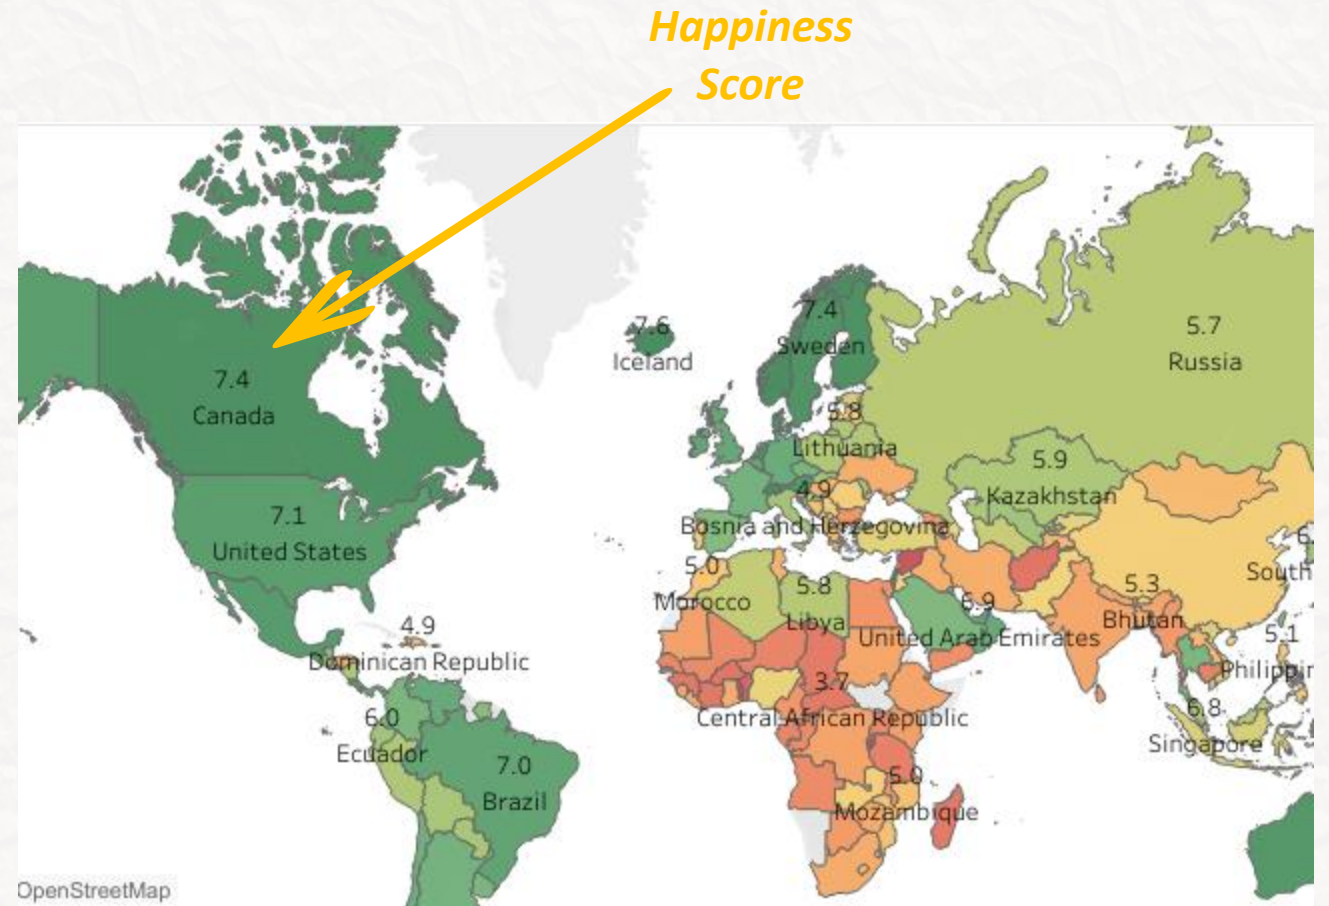

Geographic

- Happiness levels vary widely by country.

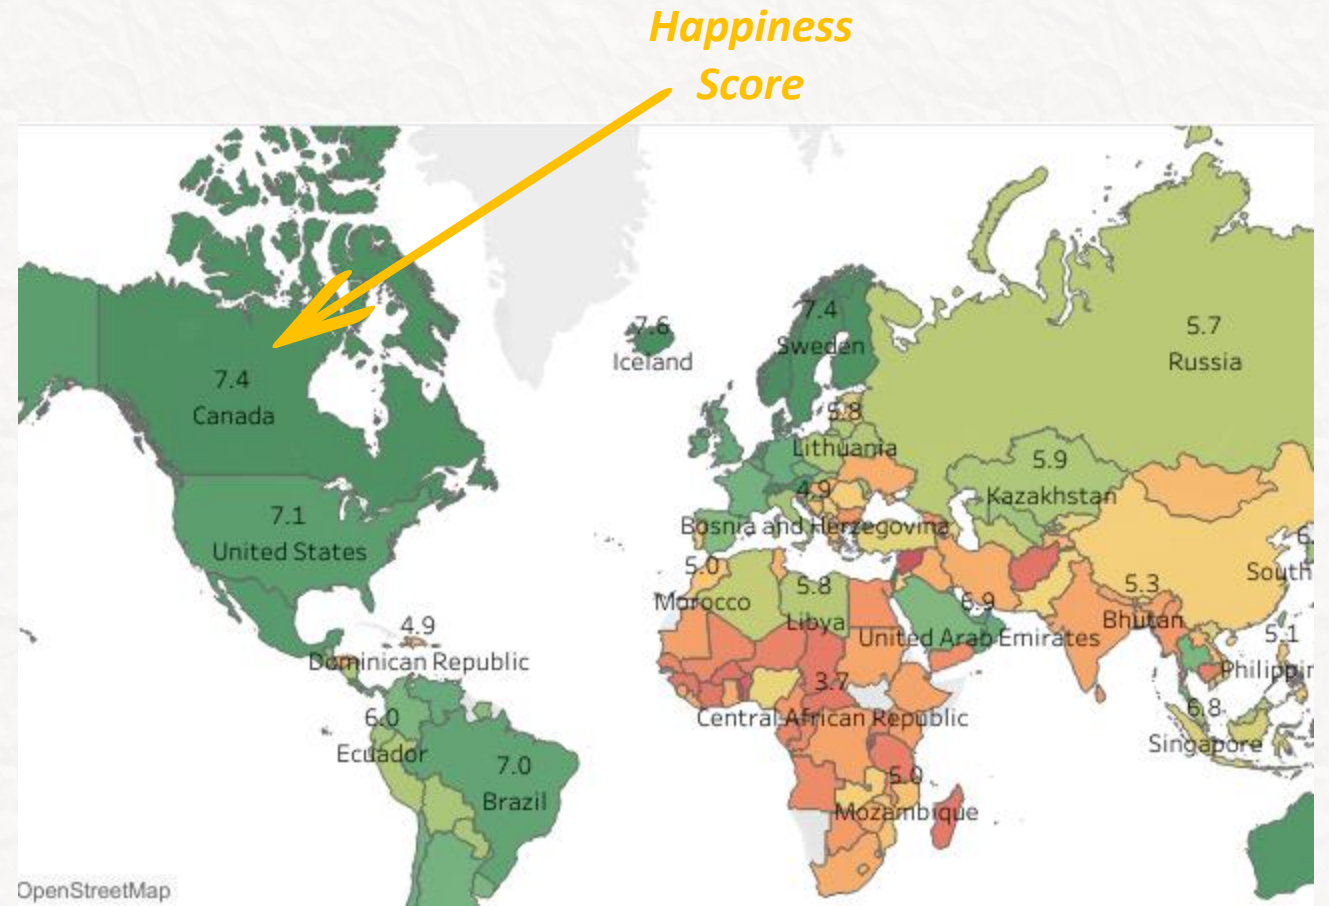

Geographic

- Happiness levels vary widely by country.
- Little correlation that we find between geographical location and happiness

Geographic

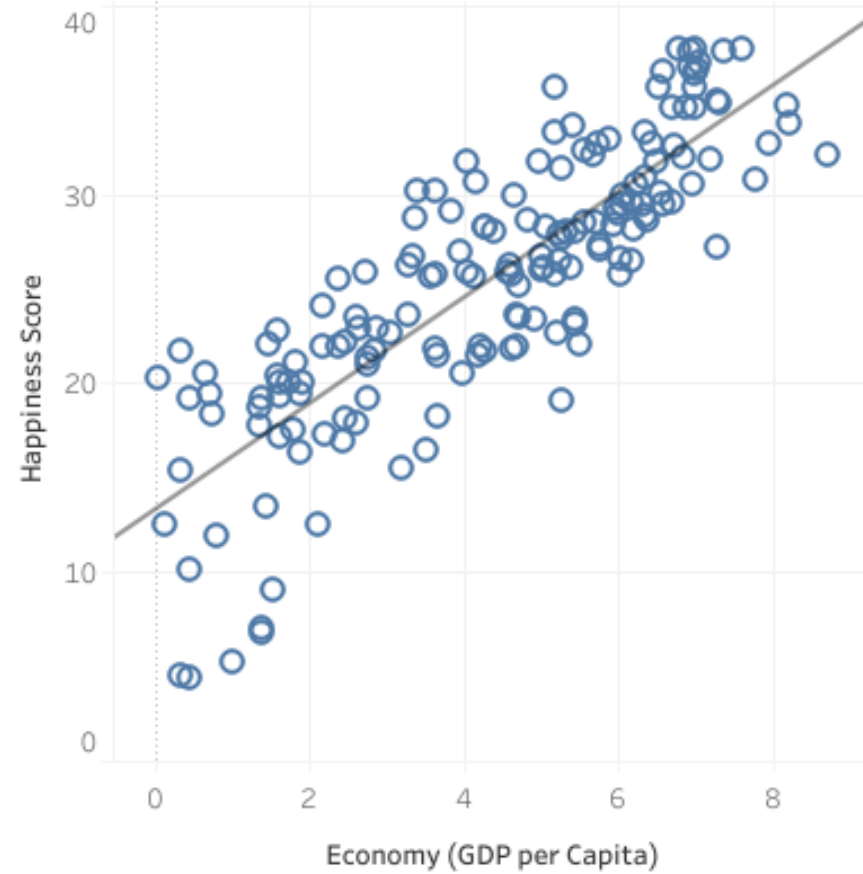

- Happiness levels vary widely by country.
- Little correlation that we find between geographical location and happiness
- Geographical location alone was not a strong indicator of happiness.

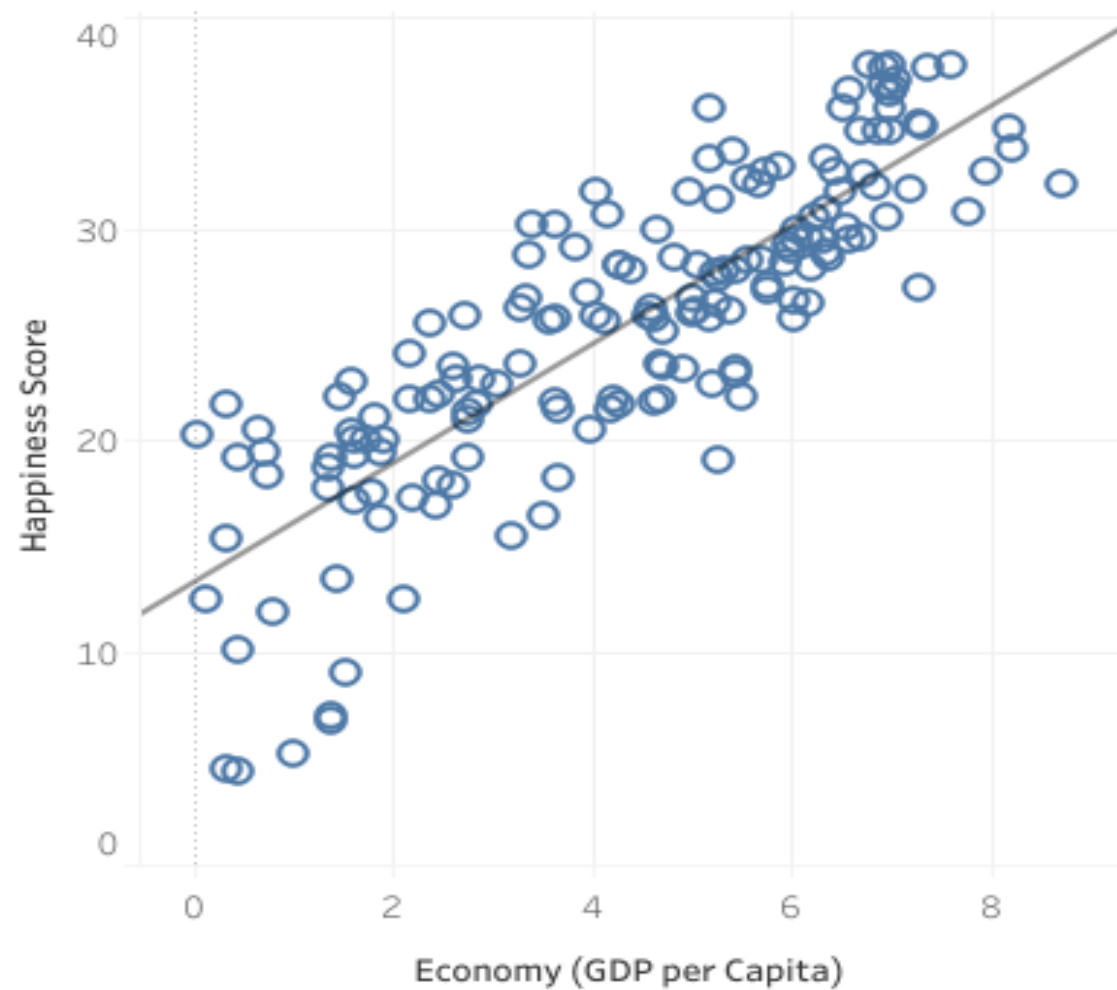

Happier countries:

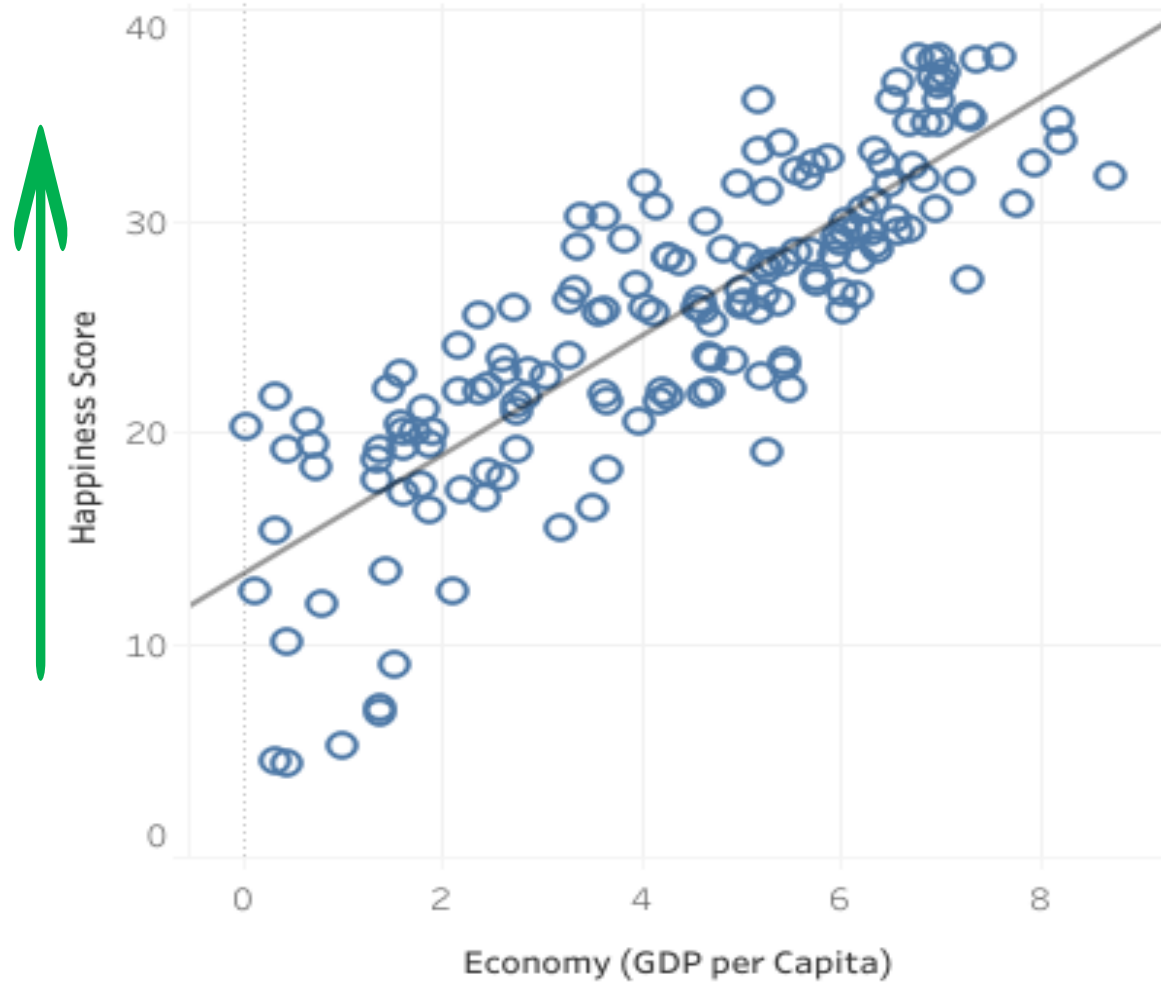

Correlated demographics and economics?

Wealth

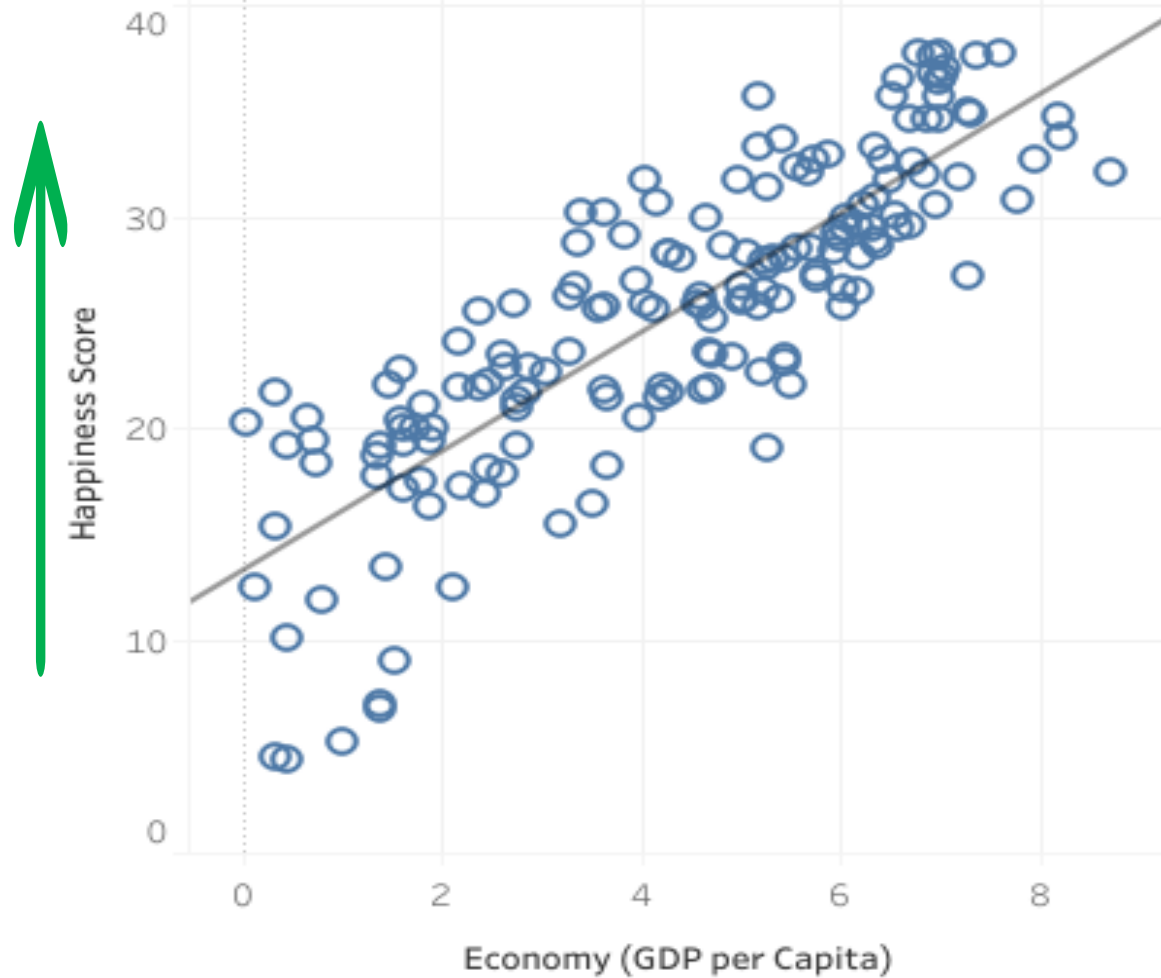

Happier

Happier

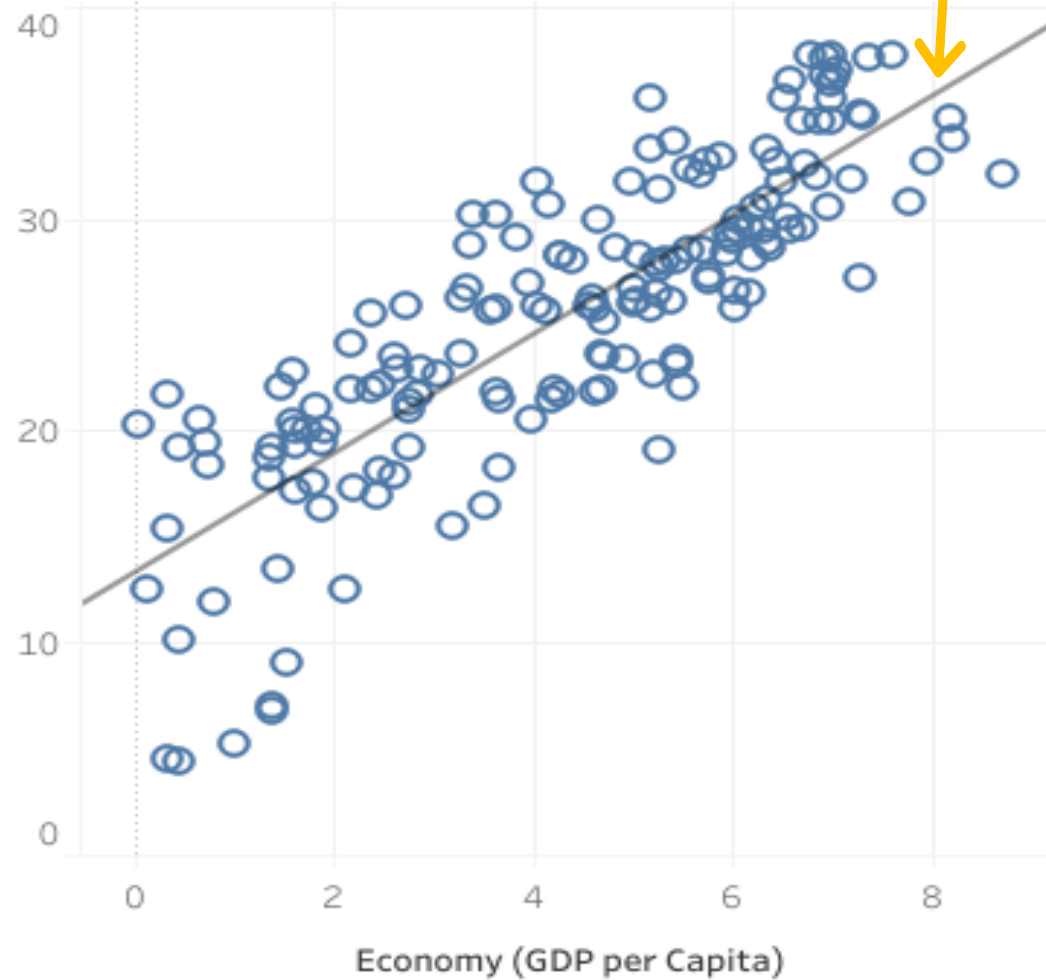

Wealthier

Happier

Happiness Score

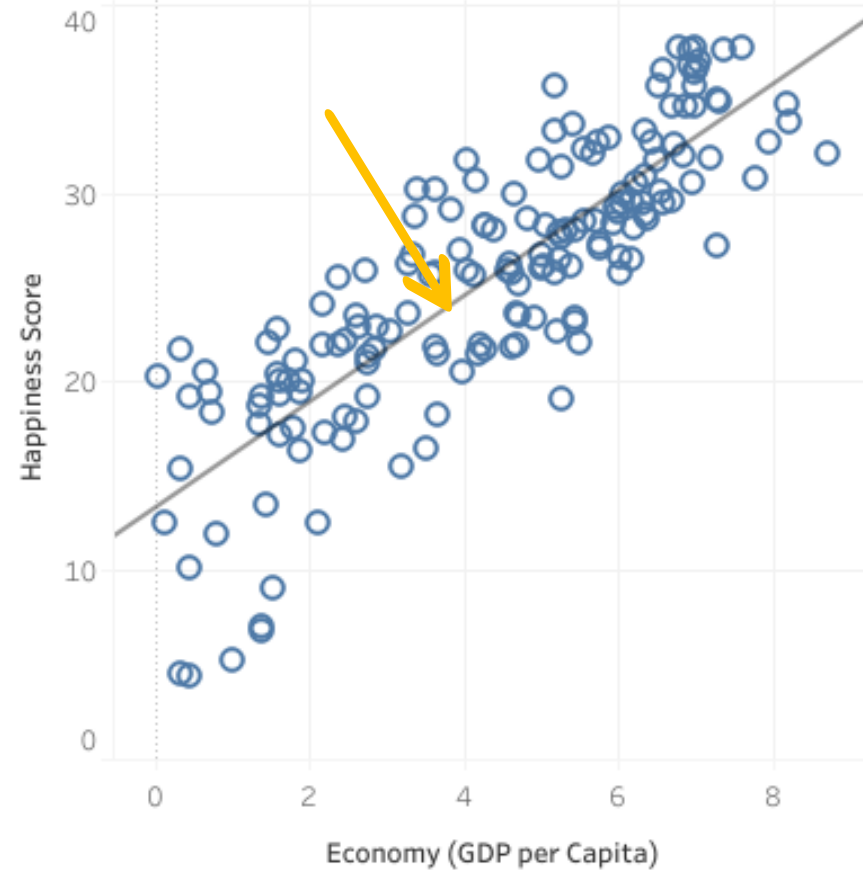

Testing for Linear
Correlation

Wealthier

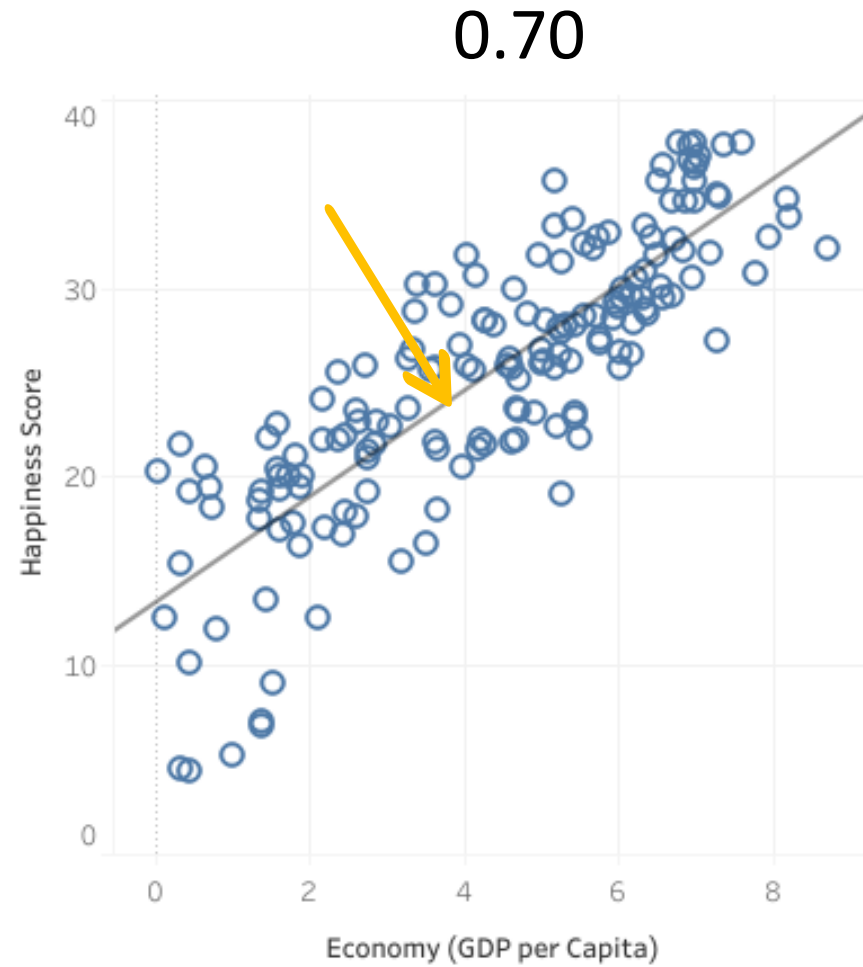

Wealth

- Positive correlation between **Happiness** and **Gross Domestic Product (GDP)**

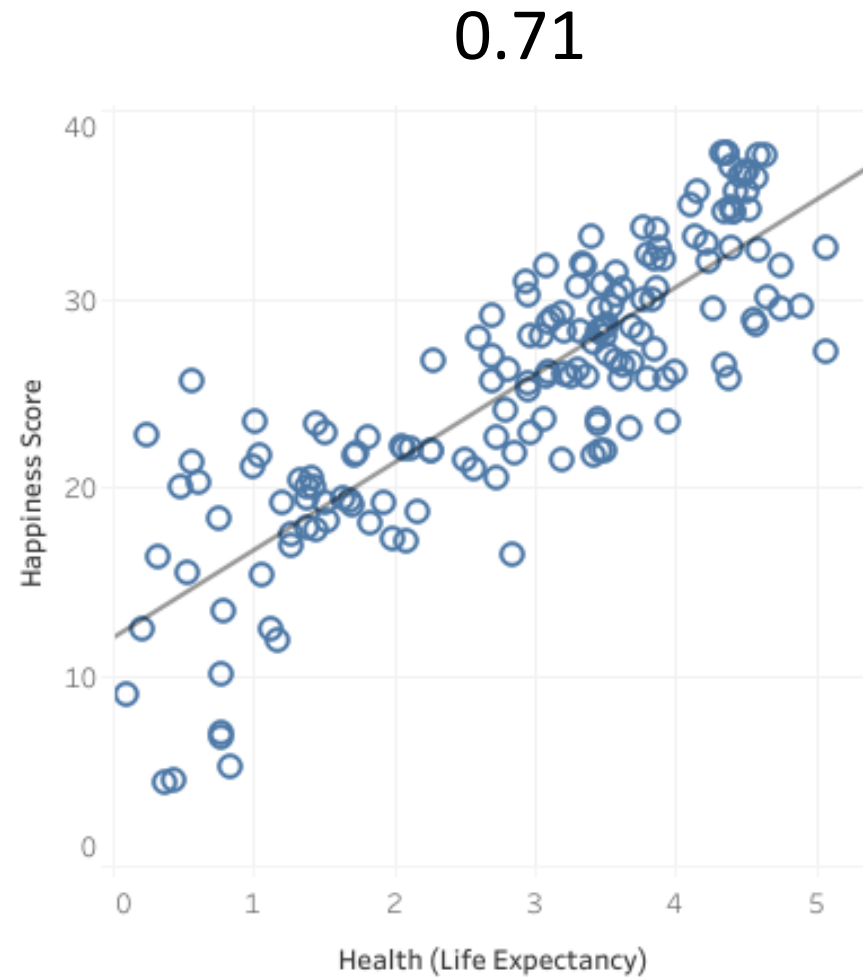

Wealth

- Positive correlation between **Happiness** and **Gross Domestic Product (GDP)**

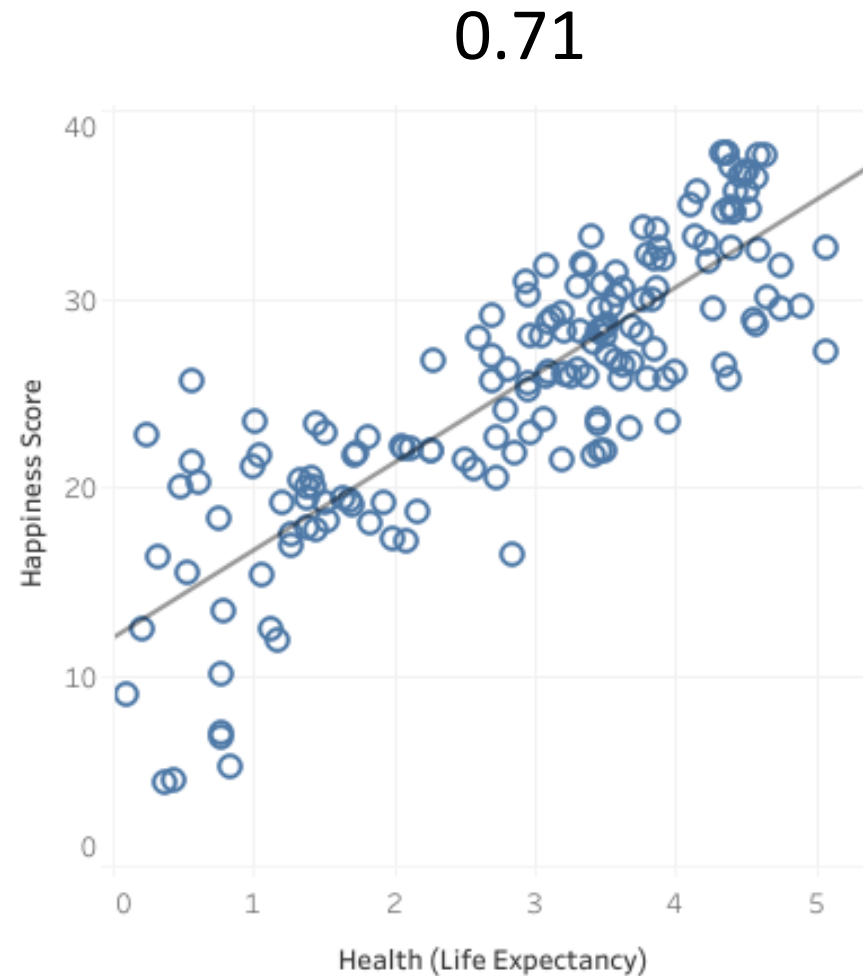

Health

- Stronger correlation between **Happiness** and **Health (Life Expectancy)**

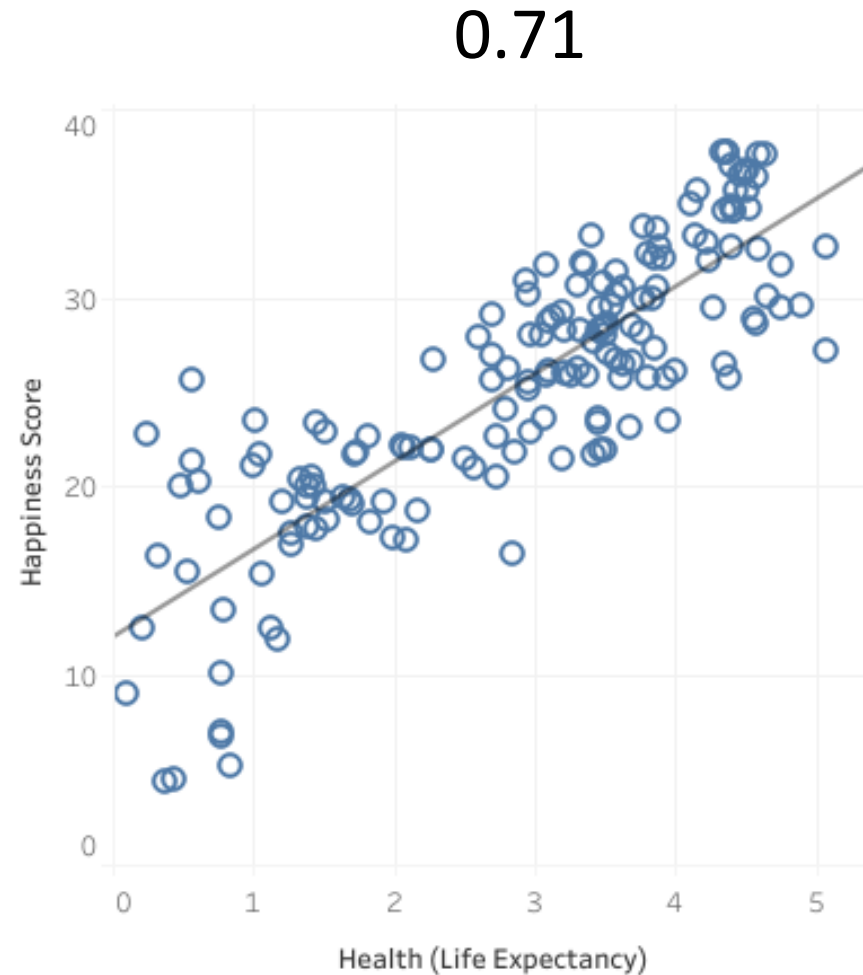

Health

- Stronger correlation between **Happiness** and **Health (Life Expectancy)**
- Are **happy** people **healthy**, or are **healthy** people **happy**?

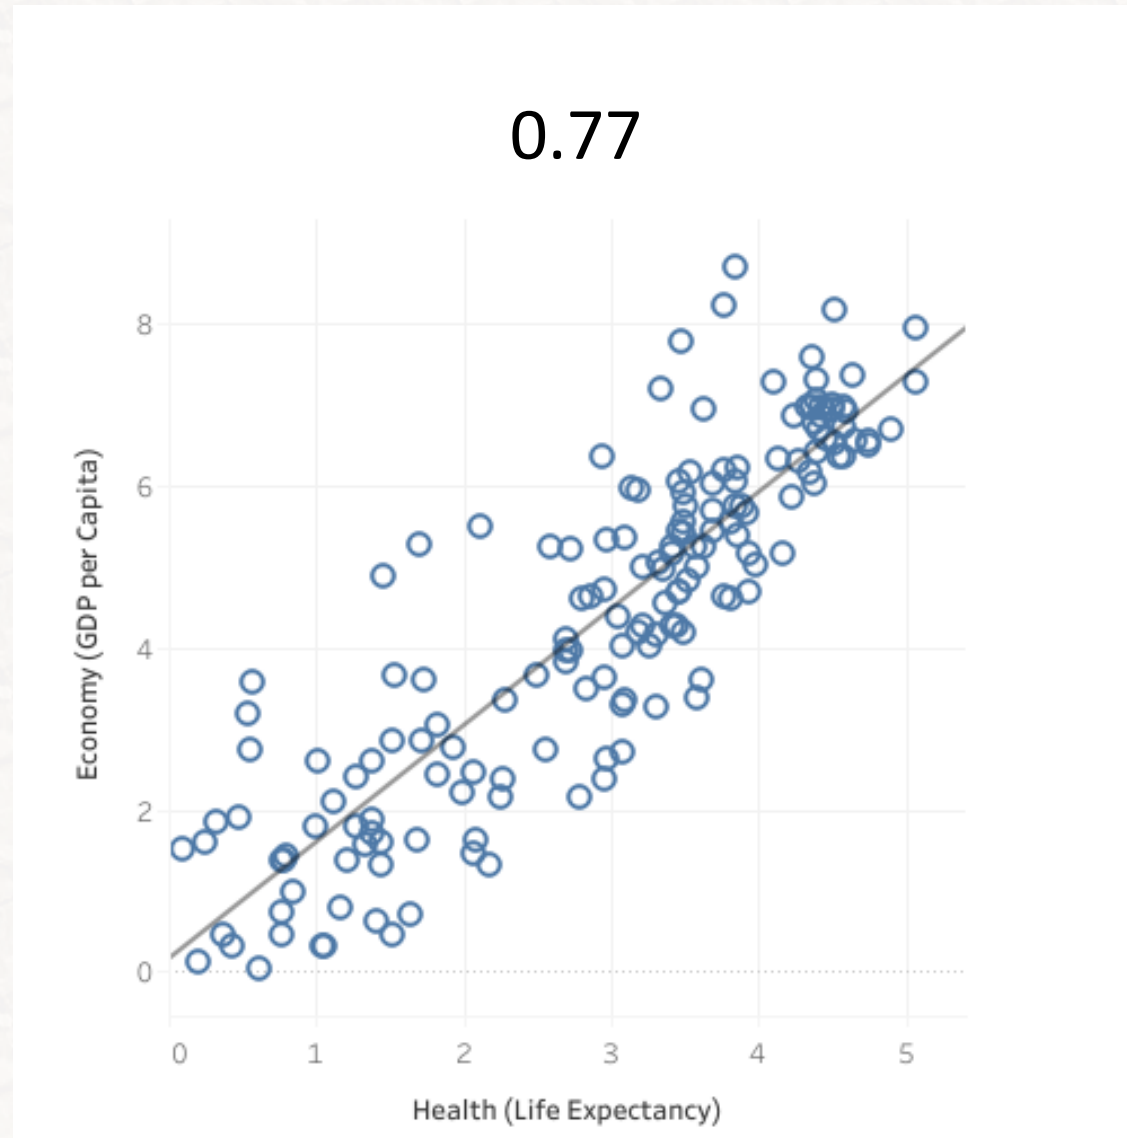

Health

- Stronger correlation between **Happiness** and **Health (Life Expectancy)**
- Are **happy** people **healthy**, or are **healthy** people **happy**?
- What contributes to a longer **life expectancy**?

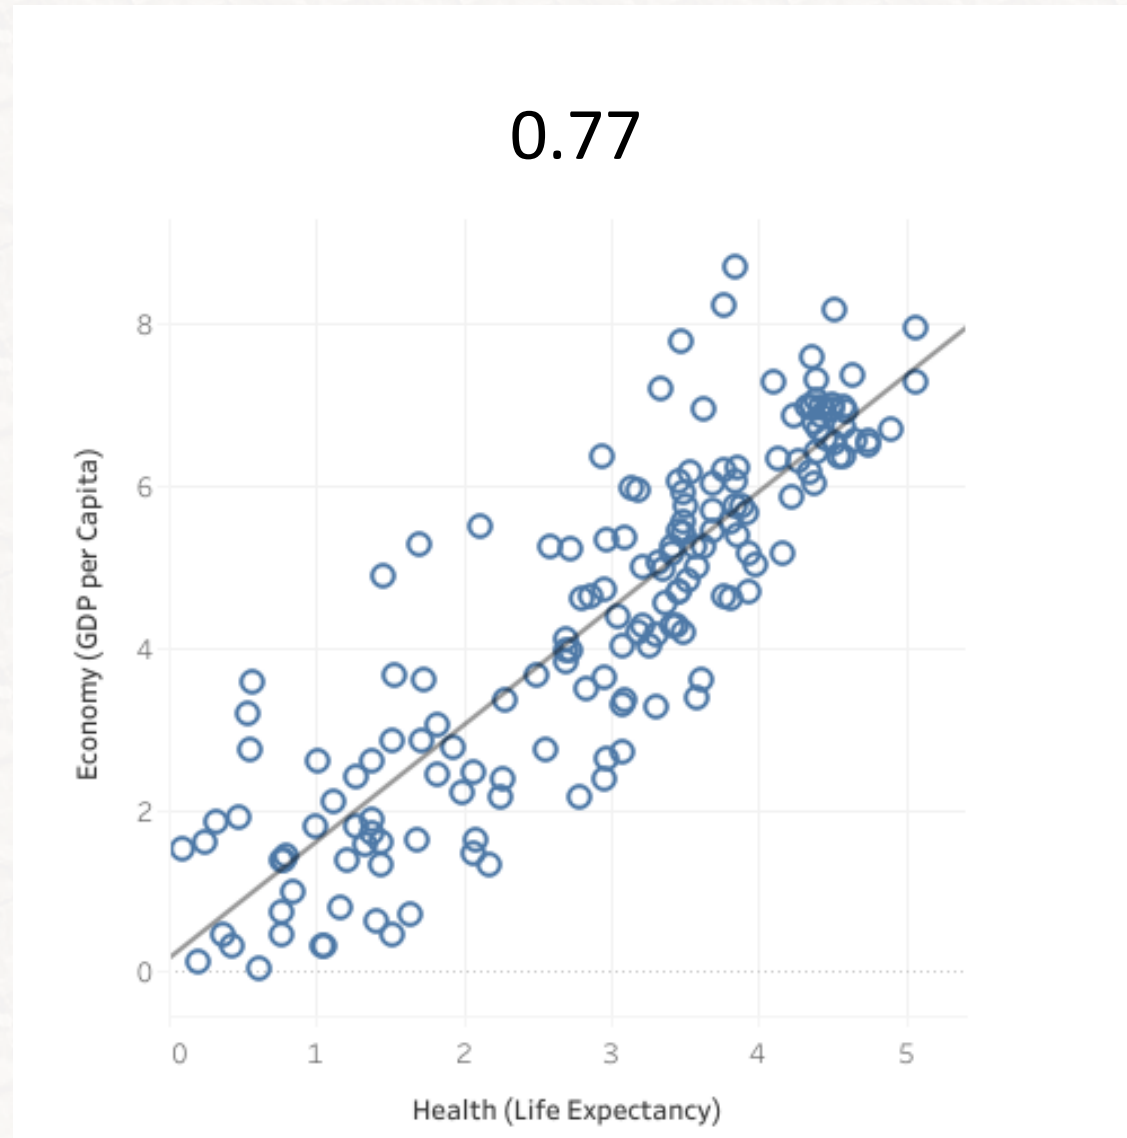

Wealth Vs Health

- Even stronger correlation between **Gross Domestic Product (GDP)** and **Health (Life Expectancy)**

Wealth Vs Health

- Even stronger correlation between **Gross Domestic Product (GDP)** and **Health (Life Expectancy)**
- **Wealthy** and **healthy** countries have higher average **happiness levels**

Conclusion

Conclusions

1

Wealthier countries and economic growth tend to contribute to higher average happiness levels.

Conclusions

1

Wealthier countries and economic growth tend to contribute to higher average **happiness** levels.

2

Healthier countries often have **happier** populations, and this correlation is often linked to their level of **wealth**.

Conclusions

1

Wealthier countries and economic growth tend to contribute to higher average **happiness** levels.

2

Healthier countries often have **happier** populations, and this correlation is often linked to their level of **wealth**.

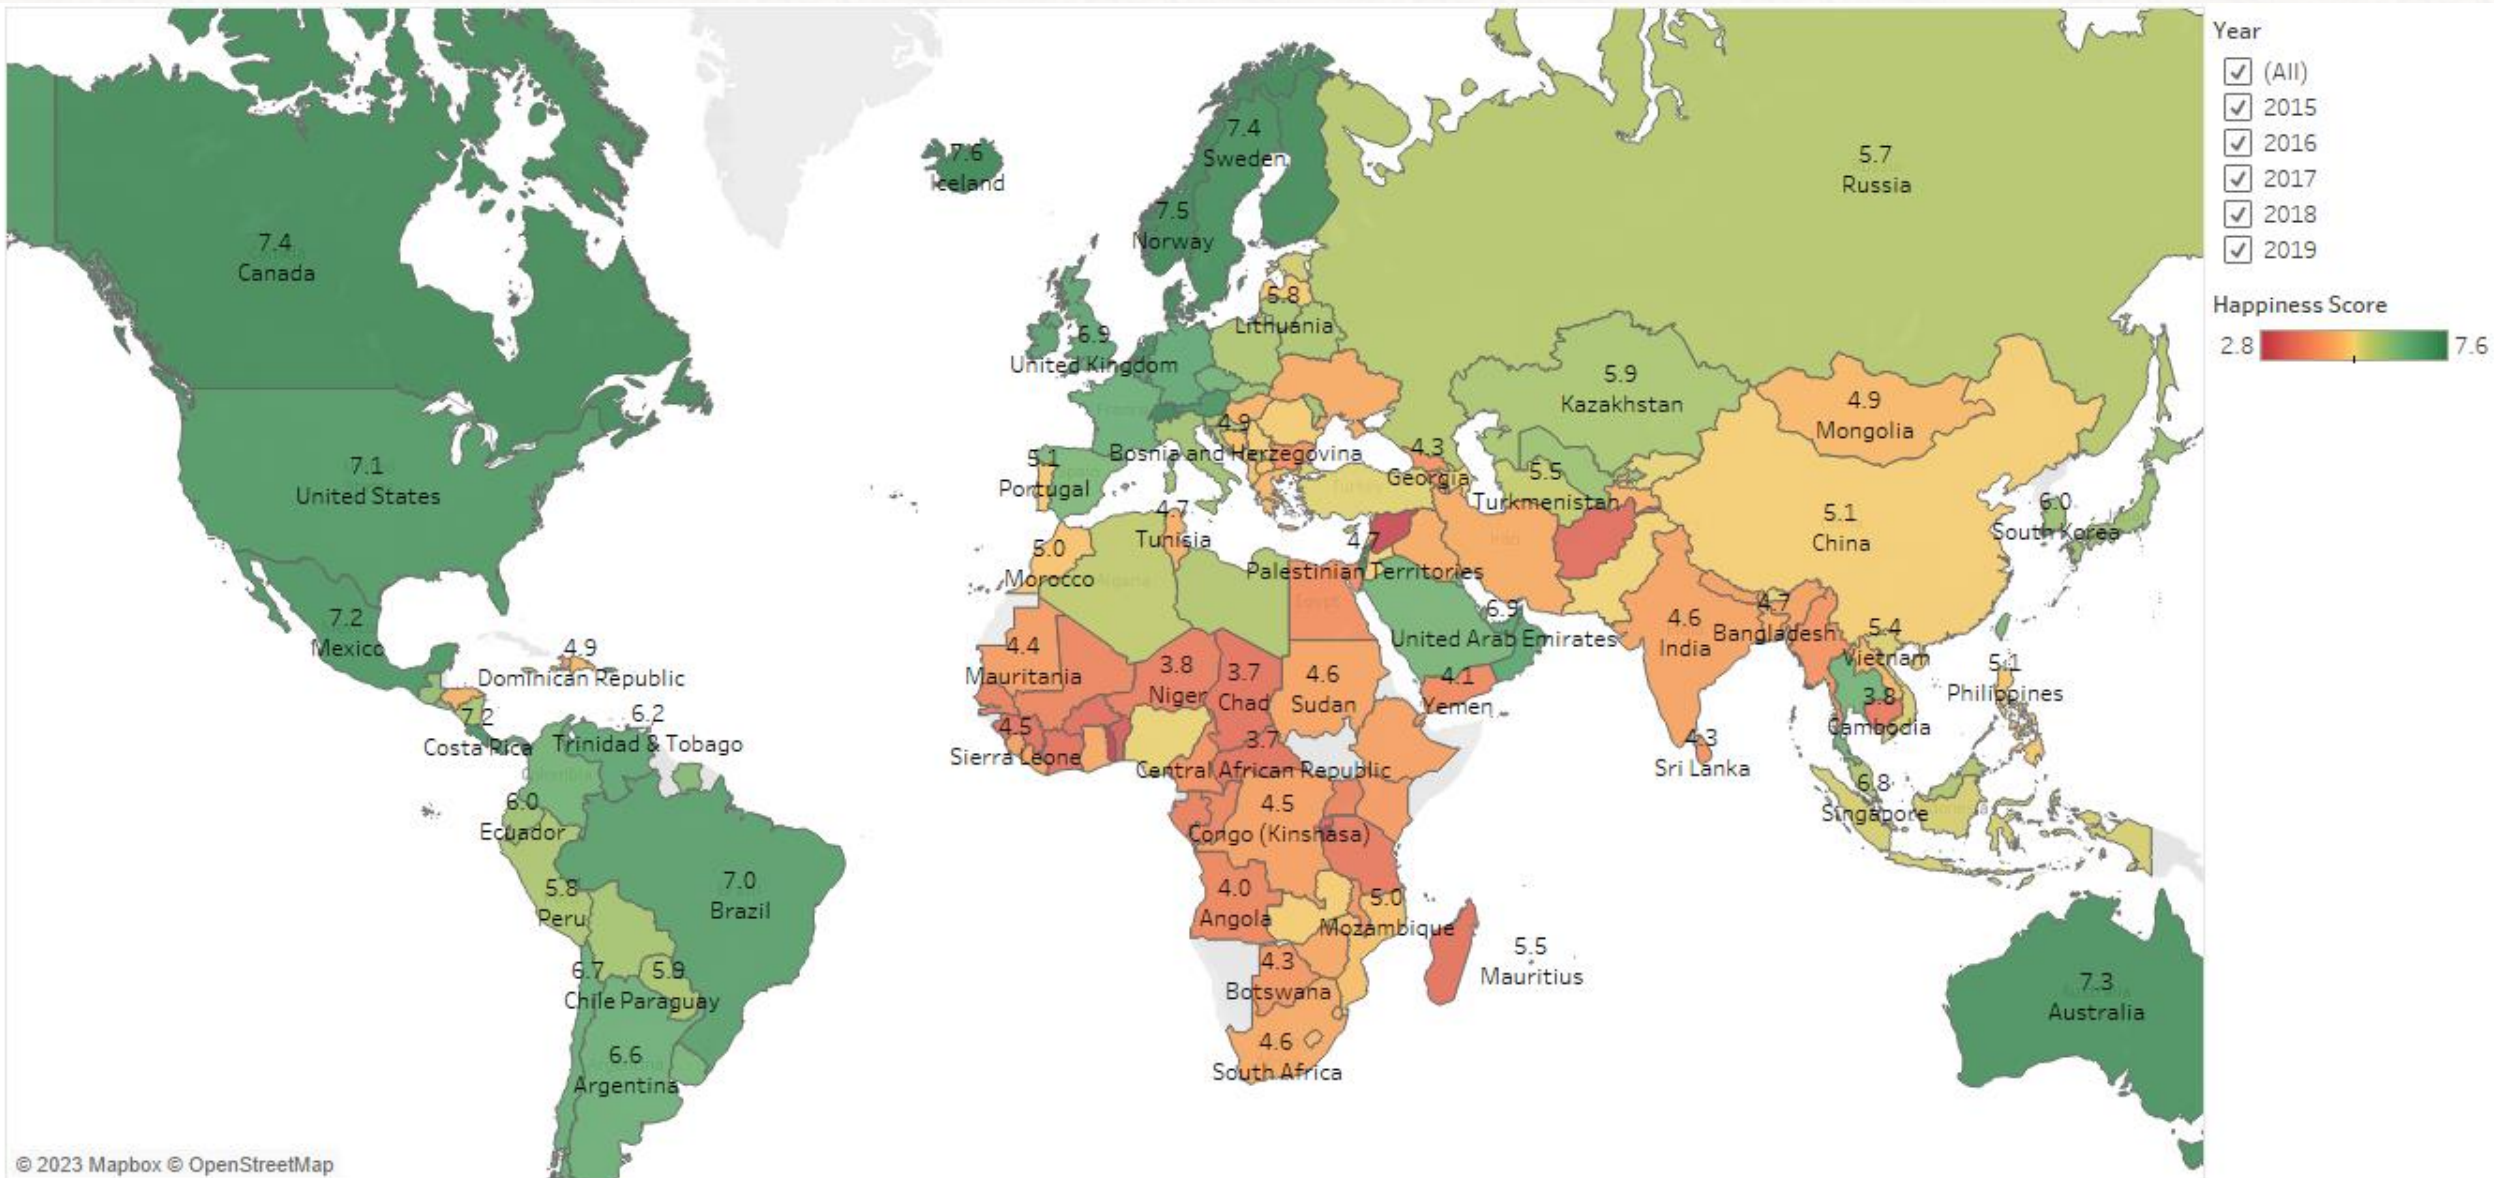

3

***Wealth**, **health**, and **happiness** are intertwined, as evidence suggests their close correlation.

*Does not mean there is a causation.

Further analysis needed.
